modal analysis of the SC is performed and employed as an introduction to the nonlinear modal analysis of Section 6. Section 5 shortly presents the algorithm used for the computation of nonlinear normal modes.

Nonlinear modal analysis of the SmallSat spacecraft

Just as the primary use for normal modes of motion of linear systems is the modal analysis associated with them, the concept of nonlinear normal modes of vibration suggests the definition of a proper "nonlinear modal analysis"™ in order to obtain the response of a system in terms of nonlinear modal coordinates.

findings of linear theory, nonlinear mode localization may occur in perfectly cyclic nonlinear systems [6–9]. Other studies dealing with mode localization in nonlinear cyclic systems are [10–12]. Because any attempt to apply traditional linear analysis to nonlinear systems is bound to fail, the nonlinear normal mode (NNM) theory is used herein.

experimental modal analysis procedures. The applicability of the same analysis and prediction techniques to non-linear structures is explored. The use of constant-force stepped-sine excitation and subsequent circle-fit modal analysis procedures for identifying non-linearities is reviewed. Also, the reciprocal-of-receptance analysis is extended for
