

## **model driven systems development pdf**

Model-driven engineering (MDE) is a software development methodology that focuses on creating and exploiting domain models, which are conceptual models of all the topics related to a specific problem. Hence, it highlights and aims at abstract representations of the knowledge and activities that govern a particular application domain, rather than the computing (i.e. algorithmic) concepts.

## **Model-driven engineering - Wikipedia**

Model-driven architecture (MDA) is a software design approach for the development of software systems. It provides a set of guidelines for the structuring of specifications, which are expressed as models. Model-driven architecture is a kind of domain engineering, and supports model-driven engineering of software systems. It was launched by the Object Management Group (OMG) in 2001.

## **Model-driven architecture - Wikipedia**

The Model Driven Architecture (MDA) developed by the OMG is a framework for software development using a system modeling language. The MDA aims to enhance portability by way of separating system architecture from platform architectures. The primary components of MDA technologies are the Platform Independent Model (PIM), and the Platform Specific Model.
