data amply show that multi-way analysis is not solely applicable in spectral analysis – a fact that is still new in chemometrics. In fact, to some degree this thesis shows that the noisier the data, the more will be gained by using a multi-way model as opposed to a traditional two-way multivariate model.

Multi-way Analysis in the Food Industry

Multiway data analysis is a method of analyzing large data sets by representing the data as a multidimensional array. The proper choice of array dimensions and analysis techniques can reveal patterns in the underlying data undetected by other methods.
