

near net shape manufacturing pdf

Near net shape is an industrial manufacturing technique. The name implies that the initial production of the item is very close to the final (net) shape, reducing the need for surface finishing. Reducing traditional finishing such as machining or grinding eliminates more than two-thirds of the production costs in some industries.

Casting is a manufacturing process that is used for making complex shapes that would otherwise be difficult or uneconomical to make. Casting takes many forms, including sand, continuous and die casting.

3D printing is any of various processes in which material is joined or solidified under computer control to create a three-dimensional object, with material being added together (such as liquid molecules or powder grains being fused together). 3D printing is used in both rapid prototyping and additive manufacturing. Objects can be of almost any shape or geometry and typically are produced using ...

Novel W Cr alloy with density comparable to conventional tungsten heavy alloys (WHA). Processing of W Cr is by both press and sinter and the novel additive manufacturing technique bound metal deposition (BMD). W Cr is solid state sintered resulting in better shape retention of 3D printed parts compared to liquid phase sintered WHAs. Consolidated W Cr alloy exhibits a finer microstructure ...
