A network segment, also known as a network security zone, is a logical grouping of information systems in an enterprise network. An enterprise network is divided into manageable network segments to reduce the scope of compliance, limit data exfiltration, and reduce the attack surface (Palo Alto Networks, n.d.).

An Asymmetric Key-Based Security Architecture for Wireless Sensor Networks 1. Introduction Security is an indispensable requirement for most sensor network applications. Though security is regarded as a standalone component of the architectures of many systems, in case of wireless sensor networks (WSNs), it must get adequate attention.
