Acrylamide (or acrylic amide) is an organic compound with the chemical formula $CH_2=CHC(O)NH_2$. It is a white odorless solid, soluble in water and several organic solvents. It is produced industrially as a precursor to polyacrylamides, which find many uses as water-soluble thickeners and flocculation agents. It is highly toxic, and partly for that reason is mainly handled as an aqueous solution.

Acrylamide - Wikipedia

Management of Hazardous Drugs in the Workplace. The Occupational Safety and Health Administration (OSHA) first published guidelines for the management of cytotoxic (antineoplastic) drugs in the work place in 1986 (OSHA, 1986), and the guidelines were made available in the peer-reviewed literature that same year (Yodaiken, 1986).

Endocrine disruption: The European commission has determined that there is sufficient evidence that DBP and DEHP leads to endocrine disruption in living organism. In addition, the Endocrine Disruption Exchange (TEDX) includes DEP, DEHP, and DBP as endocrine disruptors. Two decades of research suggest that phthalates disrupt hormones, which can lead to harm during critical periods of development.

Phthalates - Safe Cosmetics

A chemical formula is a way of expressing information about the proportions of atoms that constitute a particular chemical compound, using a single line of chemical element symbols and numbers.

Lead poisoning is a type of metal poisoning caused by lead in the body. The brain is the most sensitive. Symptoms may include abdominal pain, constipation, headaches, irritability, memory problems, inability to have children, and tingling in the hands and feet. It causes almost 10% of intellectual disability of otherwise unknown cause and can result in behavioral problems.

Lead poisoning - Wikipedia

1,1-dimethylhydrazine is a member of the class of hydrazines that is hydrazine substituted by two methyl groups at position 1. It has a role as a carcinogenic agent, a teratogenic agent and a fuel. It derives from a hydrazine.

Society of Toxicology - Annual Meeting 2017

The mass of aerosol produced from each device varied depending on the amount of power that was applied to the atomizer. The five devices tested in the study produced between 38 mg to over 692 mg of aerosol in 25 puffs, in the range of 5.2â€“25 W, as shown in Table 1. Data for all replicates are given in supplemental materials Appendix C. Since yield depends on the total number of puffs, results ...

Effect of variable power levels on the yield of total
